

Nebius Brand Guidelines

What “Nebius” means

Our brand name, Nebius, was carefully chosen to reflect our mission and values as a company. Combining “nebula”, the Latin word for cloud, with a reference to the endless Möbius strip, our name embodies our belief in the endless possibilities offered by cloud technologies.

Toolbox

Logo of Nebius is a text without a sign. There are two types of glyphs in it. Two of them looks like a mebius line, they translate flexibility and cross of two essences. Other glyphs are about technology, structure and confidence.

Logotype color

Solid lime background

Deep blue outline

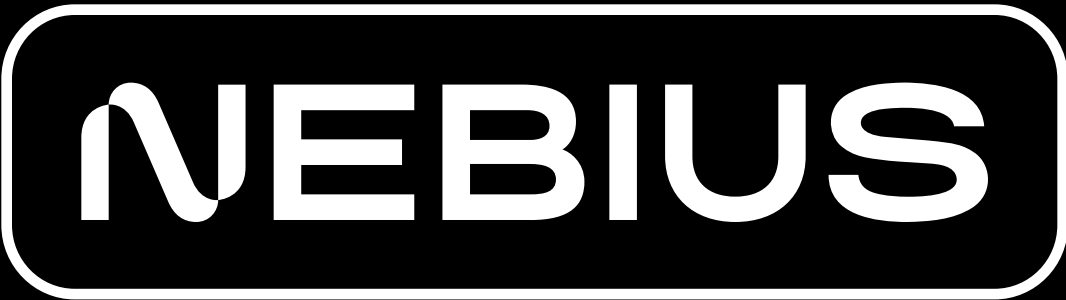

Deep blue outline

Solid lime background

Solid white background (monochrome)

White outline (monochrome)

Incorrect usage

Don't apply any colors to the logo except for approved solid brand colors ("Deep blue", "Lime" and "White")

business is **NEBIUS** an AI-centr

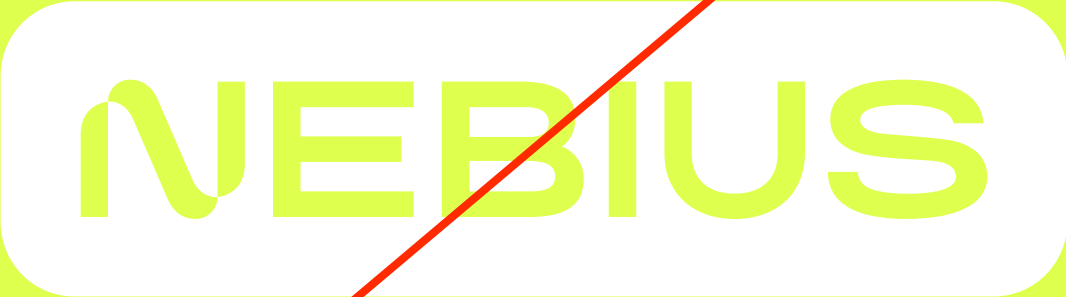

Do not use the logo as part of the text

Don't make the logo too small

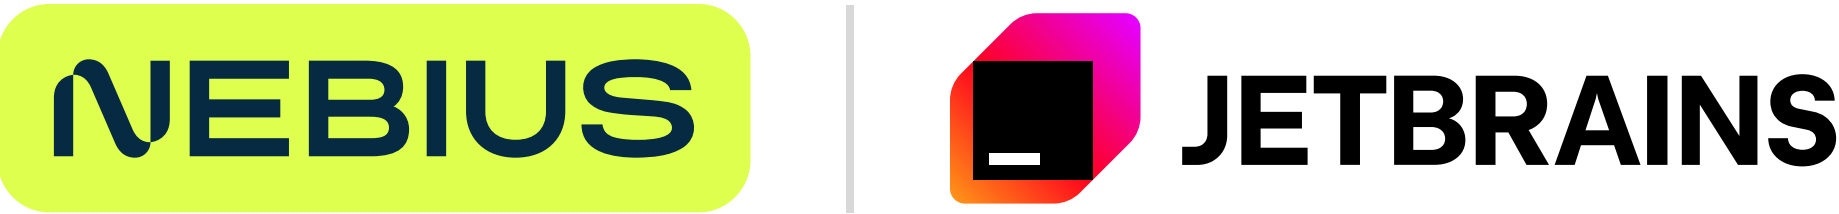

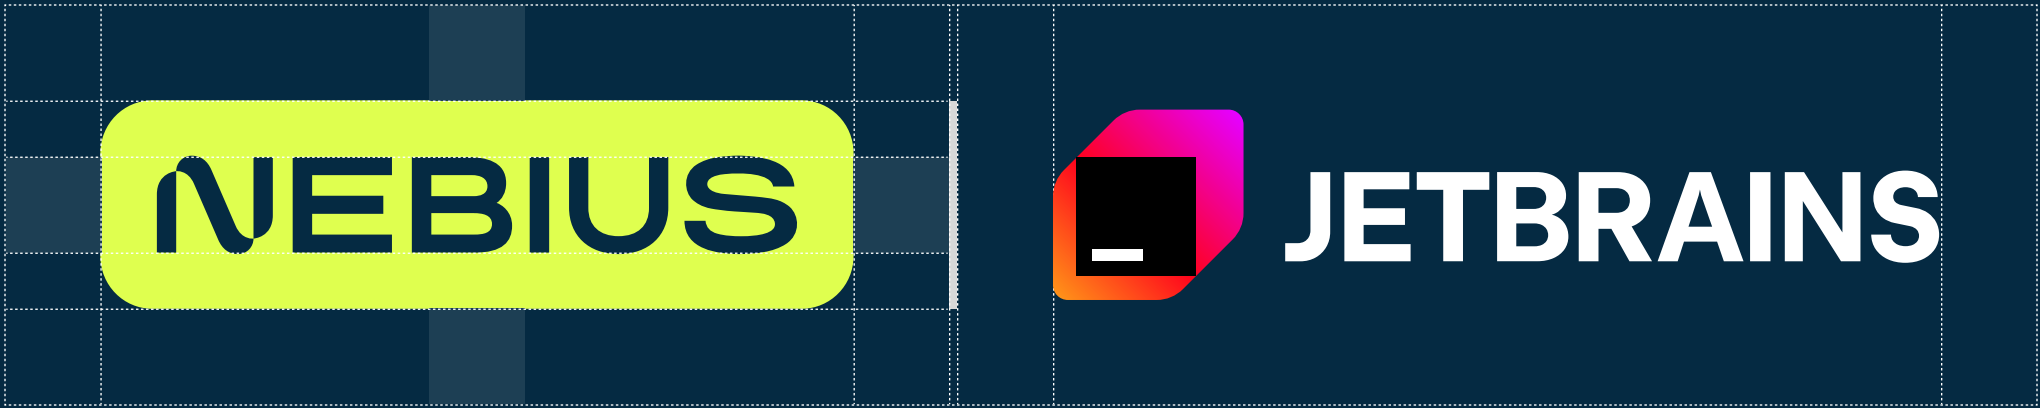

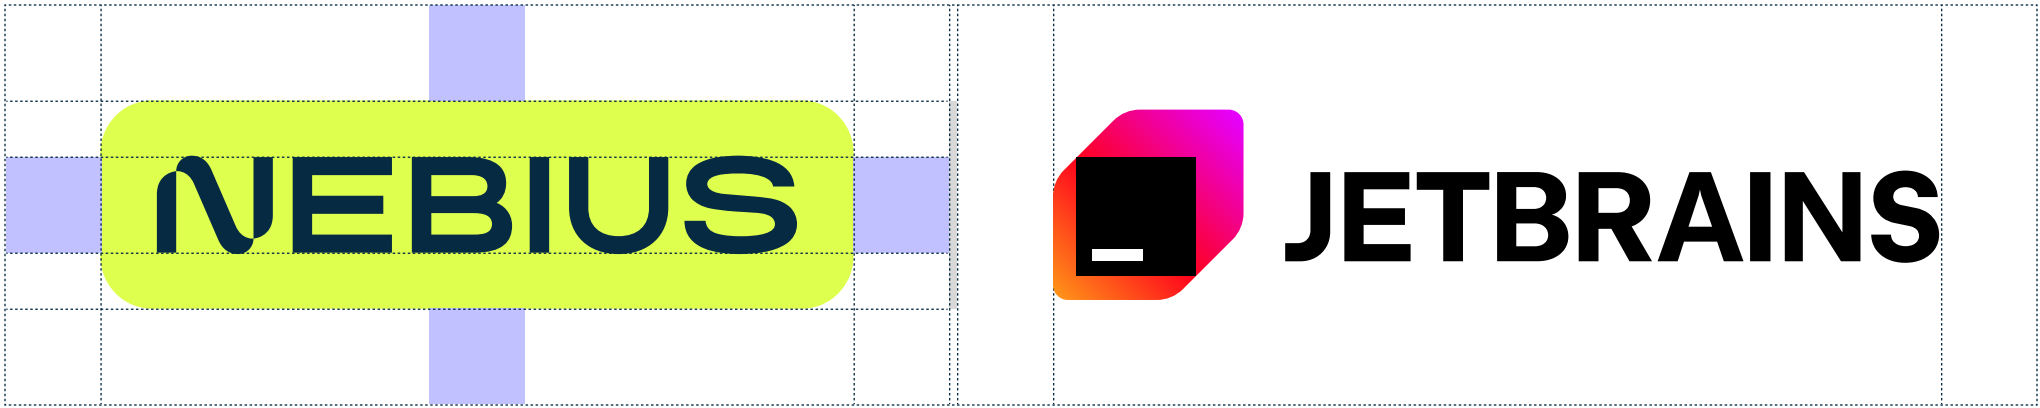

Do not modify the shape beneath the text part of the logo

Avoid low contrast between the logo and background

Never rotate, distort, or transform the logo disproportionately

With environment in mind

The data center is eco-friendly. We utilize power from our solar panel farm and use excess heat generated from the servers to keep nearby houses warm.

Own data center in Finland

Located in South Finland, our data center is packed with modern systems in every aspect of compute, storage, and data processing.

Pattern

Our basic move derives from the twisting effect in the logo but takes a step further and becomes the overlap with the exclusion effect.

Service illustrations

Compute Cloud

This service provides secure and scalable computing capacity for hosting, testing and prototyping your projects.

GPU-accelerated computing instances use top-of-line NVIDIA® GPUs, such as NVIDIA® H100 Tensor Core, and are specifically designed for AI training, deep learning and other high-performance computing workloads.

[Get started](#)[Documentation](#)

Latest GPUs available

Solve complex computing problems with thousands of NVIDIA® H100 Tensor Core GPUs of full mesh connection without any oversubscription and with latest InfiniBand network up to 3.2Tb/s per host.

[Learn more >](#)

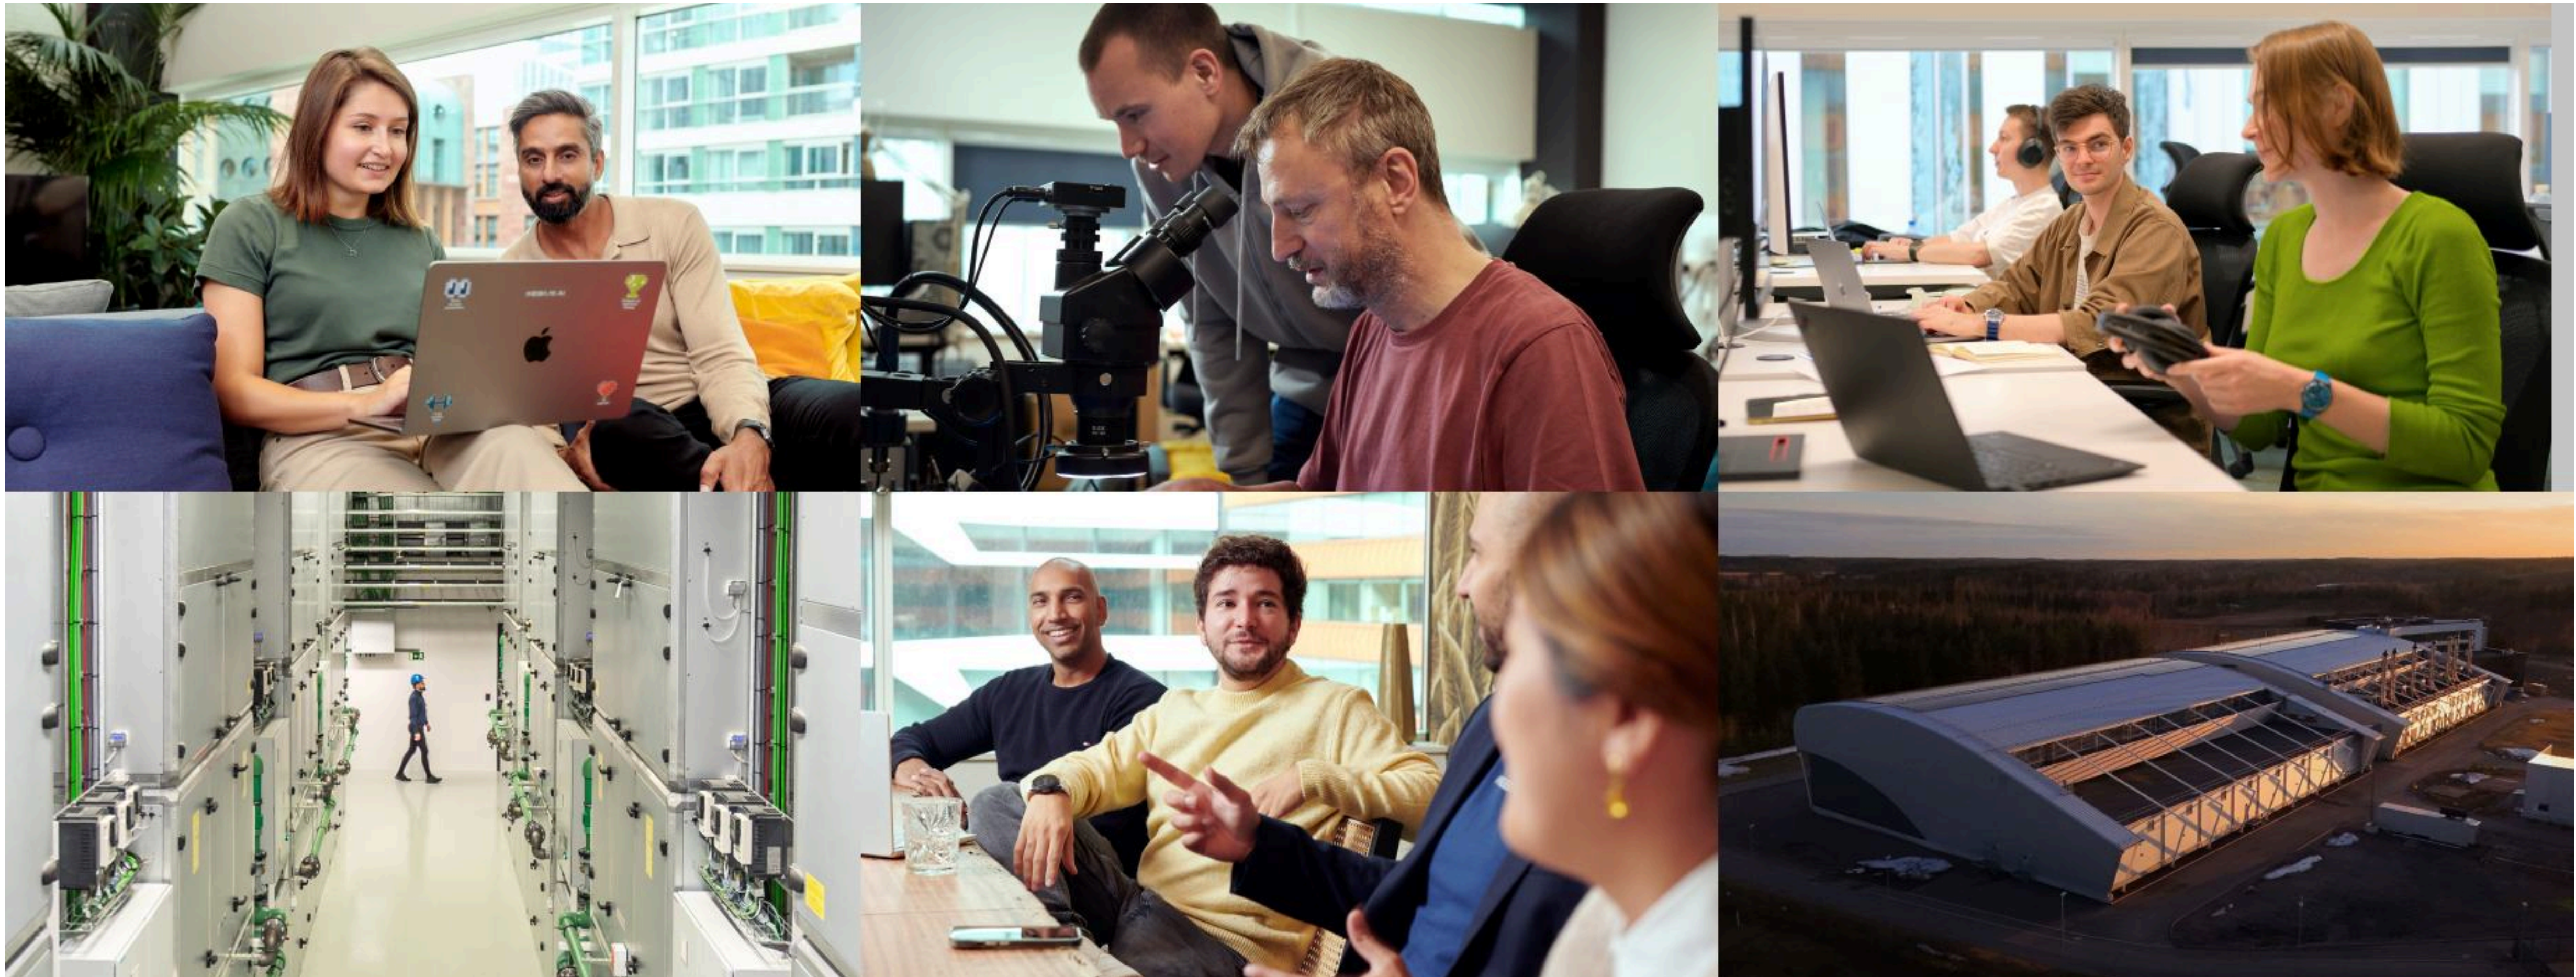

Unlimited scaling

Scale effortlessly from one to eight GPUs in a single virtual machine, or expand to thousands in Infiniband clusters. Choose between reserving guaranteed capacity and adapting flexibly with a pay-as-you-go model.

Convenient control

Manage your VMs in the console, via the CLI or using popular tools like Terraform, Packer, or Jenkins. Choose the necessary number of cores, disks, RAM, and the amount of GPU. Easily monitor their utilization and associated costs.

Our photos should feel spacious, clear and natural.
These are three main things that guide our decisions when
it comes to lifestyle photoshoot, portrait and stock photos

It is always a good idea to add brand colors to a photo, but remember to be moderate and don't go overboard.

Nebius B.V.
Gustav Mahleraan 300,
1082 MA Amsterdam

The AI revolution needs new infrastructure – compute, storage, platforms, tools and services for developers. This is what we are building. Our aim is to be a leading provider of infrastructure and services for AI builders globally.

Across the group, our team is built around an R&D core of about 850 top-tier AI engineers, who have worked together for years in big tech creating world-class infrastructure. This means that we understand what AI professionals need, and how to build it for them.

We are a European company with a global footprint and a Nasdaq listing. Headquartered in Amsterdam, we have R&D hubs across Europe, North America and Israel. Our businesses operate worldwide.

Our core business is Nebius, an AI-centric cloud platform built for intensive AI workloads. Nebius builds full-stack infrastructure for AI, including large-scale GPU clusters, cloud platforms and tools and services for developers.

As well as Nebius, the group includes Toloka, a data partner for all stages of generative AI development; TripleTen, a leading edtech player re-skilling people for careers in tech; and Avride, which develops autonomous driving technology for self-driving cars and delivery robots.
